

COBA Expansion Joints

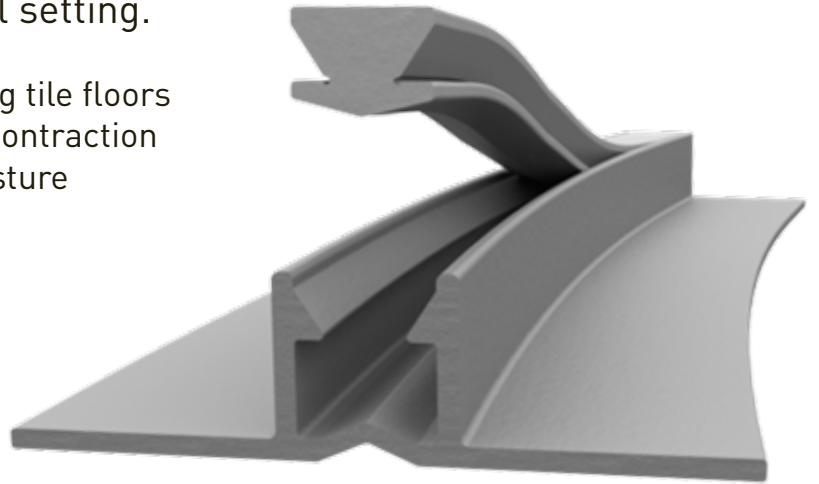

COBA
africa

COBA expansion joints for use in the tiling of floors in a commercial or residential setting.

These joints are typically used when laying tile floors to accommodate the ongoing expansion/contraction of the tiles through temperature and moisture changes.

The primary function of the joint is to prevent cracking and/or loss of adhesion to the screed between tiles.

Our unique material formulation provides a cost-effective alternative to its aluminium counterpart without compromising on performance.

What are the benefits

- Produced with certified PP/LDPE material to provide better impact strength.
- LDPE insert is renewable / removable if worn or damaged.
- Custom/branded punch outs optional.
- Can be made in any colour required.
- Locally produced.
