VOC CERTIFICATE – TRIO SCRAPER

Our product, Trio Scraper, was sent to GUT in Aachen Germany, to have various tests performed. GUT is an International Accreditation Agency which performs tests for the carpeting industry in Europe.

The attached document titled GUT Criteria final 2011, confirms on page 4, item 2, that the components which make up the Trio Scraper, namely Ravello, Padova and Toscane, emit very low emissions. Please refer to below extract from the GUT Criteria final 2011 document.

2. Emission test (indoor air quality)

*The most important component of the entire test concept is the final emission test. This is carried out in a test chamber according to the regulations specified by the relevant test standards. The emission test makes sure that the product does not have a negative impact on the indoor air and within the framework of the test concept for building materials that may be used in indoor rooms may be classified as having "very low emissions". **This means that a TVOC28 value of less than 100 µ/m3 is complied with.***
