New Aptico Anti-Fingerprint Finish

FUNDERMAX®

A combination of Max High Pressure Laminates with unique Aptico Surface presents a real matte sensation that has an irresistible appearance, is effortlessly easy to maintain and features an innovative anti-fingerprint finish.

Aptico's advantages are plenty, including a gentle light reflection due to an extremely matte surface, a warm texture that works in almost every interior design style and an easy to clean element that allows you to simply enjoy your surface without worrying keeping it constantly clean. One of Aptico's more innovative features is the possibility of thermal repair for micro-scratches and abrasions. Max HPL with Aptico Surface is perfect for numerous interior applications including shop-fittings, furniture, tables, walls and décor and more.

A real matt surface sensation - an irresistible appearance, easy to maintain, with innovative anti-fingerprint finish.

Thermal repair of microscratches one of the most innovative features of Apticor is the possibility of thermal repair to superficial microscratches

Moisten/wet some kitchen paper using pure water from a spray bottle and position it on top of the damaged area.

Heat an iron to about 180°C, and then move this across the wet kitchen paper in a circular motion for max. 10 seconds.

Dry the surface with a clean, dry cloth. **note: it is recommended to repair micro-scratches within 48 hours.**

New Apticor Decors

For best results when cleaning Apticor the following precautions must be taken:

Despite its robust and resistant surface Apticor should never be treated with products which contain abrasives. Scouring sponges (green scouring fibres) or other such materials (abrasive paper or washing-up sponges) should not be used.

Strong acidic or alkaline products should be avoided because they can alter the surface structure.

Polishes or waxy products should always be avoided as this can result in the loss of Apticor's excellent surface properties.
