

SafeStore Auto Midi

Automated safe deposit locker system
for medium to large self-service areas,
without requiring a pre-built vault

GUNNEBO®

Automated technology for 24/7 accessibility

Reduce staff time as the next-generation automated technology retrieves the locker compartment without assistance from staff at any time and on any day of the week. Drive

utilisation rates, attract a broader customer base and increase locker rental fees thanks to 24/7 accessibility. Offer customers and employees user-friendly features like the interactive user interface and card reader, both of which are as easy to use as an automated teller machine (ATM). And enhance access for people with a disability with the new ergonomic touchscreen. The unit is certified by VdS as Grade VII-EX.

Sizes available for SafeStore Auto Midi

Compact by design

Discover the plug-and-play design, which is delivered as a complete unit and offers all the benefits of a smaller model -quick installation, easy integration- but larger to feature even

more options. Benefit from a large installation that is compact, does not require a pre-built vault and can be easily relocated without physical alterations. Install into lobby wall or as free-standing unit, depending on your existing environment.

Customisation according to your individual demands

Choose from nine different sizes (Midi S to Midi 5XL) with five different deposit box heights ranging from 69 to 206 mm. The maintenance service area accessed from rear

needs to have at least an area of 2.6m², so the door of the strong room can open. Customise the terminal's position (left or right), the colours and materials to better integrate into your self-service area. Avoid overloading locker compartments and forestall technical issues via the onboard weighing function. For a smaller unit, Gunnebo's SafeStore Auto Mini is available, while SafeStore Auto Maxi is available for larger installations.

Blueprint of a SafeStore Auto Midi installation

- 1. Maintenance service area 2. Strong room door 3. Strong room
- 4. Dispensing unit 5. Customer self-service area

Choose from a combination of locker sizes and configurations

There are 9 alternative shelf formations:
