## PLASTERBOND

### Description and Application

#### CATEGORY

Primer / Cement Enhancer

#### DESCRIPTION

PlasterBond is a specially formulated latex which has been developed to promote the adhesion between new plaster and the surface to which the plaster is being applied.

#### FEATURES

- PlasterBond is Alkali-resistant
- Good binding power

#### AREAS OF USE

- Incorporation into cement mixtures
- As a key coat for new plaster work

#### SURFACE PREPARATION AND APPLICATION

1. Prepare the surface for re-plastering.
2. Remove all dirt and dust from the surface to be plastered.
3. Ensure the surface is dry.
4. Apply 1 coat of Paintcor's PlasterBond.
5. Allow sufficient time to dry. The product will turn clear on drying.
6. While PlasterBond is still tacky, (just after drying) apply the new plaster.

**Note:** PlasterBond can be added to cement mixtures to improve their properties (adhesion, water resistance and strength)
