

BERLIN STADIUM

The Berlin stadium seat is designed to meet FIFA regulations and is GS safety-certified, featuring an ergonomic, moulded polypropylene seat and backrest. The seat and backrest are made from UV resistant (DIN 4102 B1) polypropylene with optional fire retardant additives. Available in a range of RAL colours with optional seat or back upholstery is available for enhanced comfort.

The seat shell is securely mounted onto a robust steel sub-frame constructed from galvanised steel tubing (25mm diameter, 2mm thick), reinforced with an additional 20x1.5mm tubular profile in the backrest section. This solid steel structure ensures stability and long-term durability. The seat frame integrates with a maintenance-free, automatic tipping mechanism, allowing the seat to return upright when not in use. To minimise noise, the tipping function is buffered, ensuring a quiet and smooth operation.

The Berlin can be riser or step mounted with a 70x60 mm cross beam to provide additional structural support to the steel uprights.

Customization options include plastic seat numbering fixed to the backrest and row lettering. Armrests are available, constructed from molded self-skinning polyurethane over a metal sub-frame for added durability and comfort.

Warranty - 5 Years

DIMENSIONS:

- Width - 425mm
- Depth - 290mm (Folded)
- Height - 800mm
