

# BERLIN WS

The Rodlin Design Berlin seat is GS safety-certified, featuring an ergonomic, injection moulded polypropylene seat and backrest. The seat and backrest are made from UV resistant polypropylene with optional fire retardant additives. Available in a range of RAL colours with optional upholstered seat or back pads available for enhanced comfort.

The seat shell is securely mounted onto a robust steel sub-frame constructed from galvanised steel or epoxy powder coated tubing (25mm diameter, 2mm thick), reinforced with an additional 20x1.5mm tubular profile in the backrest section. This solid steel structure ensures stability and long-term durability. The seat frame integrates with a maintenance-free, automatic tipping mechanism, allowing the seat to return upright when not in use. To minimise noise, the tipping function is buffered, ensuring a quiet and smooth operation.

A customisable writing surface is available, tailored to your specifications, with optional modesty panels for added functionality.

## **Warranty - 5 Years**

## **DIMENSIONS:**

- Centre-to-Centre - 500mm
- Back-to-Back - 800mm or Writing surface width dependent
