

KEMBO WAITING AREA

The Rodlin Kembo beam-mounted seating system is available in both free-standing and floor-fixed configurations, offering versatile installation options to suit different environments.

Both versions feature the same ergonomically designed, one-part polypropylene moulded seat shell, engineered for comfort and durability. The seat is securely mounted onto a cold-rolled metal tubing sub-frame (25mm diameter, 2mm thickness) using a sleek, screw-free clip-on system with plastic injection-moulded rugnoks, supporting both the seat and backrest.

The free-standing version includes a support sub-frame made from 50mm diameter cold-rolled steel tubing (2mm thickness), finished with a durable black epoxy powder coating or chrome. Plastic end caps and level adjustment feet are integrated to provide a stable, clean, and adaptable base on uneven floors.

The floor-fixed version features a robust 50mm x 50mm square steel tubing support frame (2mm thickness), with the seat framework attached to a 5mm laser-cut bracket. Like the free-standing model, all steel parts are coated in black epoxy for enhanced durability.

Warranty: 3 Years

DIMENSIONS:

- Width - 500mm
- Depth - 420mm

CONFIGURATIONS:

- Available in 2, 3, 4 and 5-seater
