

RHINO WAITING AREA

The Rodlin Design Rhino waiting area seat is a durable, one-piece injection-moulded polypropylene seat with an integrated backrest, providing a comfortable and robust seating solution for waiting areas and public environments.

With a double-wall shell, reinforced with structural ribs, the Rhino seat offers superior strength and support. The material composition consists of 87% virgin-grade polypropylene and 13% UV stabiliser pigment, with optional fire-retardant additives. Engineered for long-term outdoor or indoor use, the pigment provides heat stability and light fastness, ensuring resistance to fading. The seat is UV-resistant for up to five years. Featuring a smooth gloss finish, it is available in a range of RAL colours.

Beam mounted on hot-dipped galvanized steel or epoxy powder coated steel for long-term corrosion resistance.

Warranty - 3 Years

DIMENSIONS:

- Width - 430mm
- Depth - 456mm
- Height - 335mm
