

VERSA

The Rodlin Design Versa seating features a one-piece seat shell manufactured in either 430 brushed stainless steel at 1.2mm thickness or 2.0mm mild steel, available in perforated or non-perforated options. The seat shell incorporates integrated 5mm rigid spines designed to prevent flexing or bending of the backrest under pressure.

The support frame is manufactured from 5mm mild steel, epoxy powder coated to the client's specified colour. Customers can select between a T-leg or triangular leg assembly, depending on the aesthetic or structural requirement. The chair is fully component-based and designed for ease of assembly and maintenance.

This seating system is weather and scratch resistant, offering robust performance in high-traffic or outdoor environments. For additional comfort, an optional self-skinning polyurethane seat and backrest can be included.

Warranty - 3 Years

DIMENSIONS:

- Width - 480mm
- Depth - 450mm
- Height - 480mm
- Centres - 500mm
