

WAVE EXECUTIVE

The Wave Exec Chair is a component-based auditorium chair, designed for cost-effective maintenance and repairs by allowing for the replacement of individual parts rather than the entire chair. It is proudly manufactured in South Africa, with 100% local content. The Wave Exec Chair is available in variable widths: dependent on armrest design, allowing installers to create straight aisles on a curved bank of chairs.

The seat and backrest are made of moulded foam attached to the internal steel sub-structure, which is then attached to a wooden seat and backrest element. Both the seat and backrest are fully upholstered for enhanced comfort and aesthetics. The spring-loaded mechanism ensures the automatic return of the seat to its upright position. This mechanism is constructed using a durable zinc alloy and has undergone SABS 1528-1 testing, guaranteeing a minimum of 200,000 cycles.

The metal sub-frame is epoxy powder-coated to 70 microns for enhanced durability. The cross-member is made from 50mm x 50mm hot-rolled tube with a 2mm wall thickness, ensuring structural integrity. Each chair is securely fixed to the concrete floor using an M8 x 80mm SABS-approved bolt. The hex head of the bolt is covered with a plastic cap for a clean and finished look.

The Wave Exec Chair can be equipped with optional extras such as, a matching wooden writing tablet or polypropylene writing tablet. The tablet folds away into the arm cavity, ensuring no obstruction to venue users. Each chair can be fitted with a media box, utilizing individual armrests or common armrests. The media box is manufactured to house the required electronic components. Optional embroidered detailing is available, including embroidered seat numbers or custom embroidery tailored to your specification.

Warranty - 5 Years
