

WING

The Wing Chair is a floor mounted auditorium chair designed for durability and comfort. The automatic tip-up seat operates using a Zinc alloy die-cast spring-loaded mechanism, tested to SANS regulations, ensuring a minimum of 200,000 cycles.

The metal sub-frame is black epoxy powder-coated 50mm diameter tube cross-member. All intermediary uprights are laser-cut from 4mm mild steel for precision and structural support. The side support plates are 5mm, enhancing stability.

For floor fixing, the chairs are anchored to concrete using an M10 x 75mm coach screw and an M12 Fischer SX plug, with a plastic cap covering the bolt head.

The optional common armrest is moulded self-skinning polyurethane or solid wood, mounted onto a metal sub-frame and attached using a fir-tree plug. An optional anti-panic fold-away writing tablet is available.

The chair spacing is adjustable between 500mm and 532mm centres, increasing to 575mm when a writing tablet is incorporated. The backrest height is available in either a medium or high-back option, with a minimum recommended 900mm back-to-back spacing.

Options include seat and row numbering system, veneered seat and backrests and fold away writing tablets in polypropylene or solid wood.

Warranty - 5 Years
