## TOPROOF G5

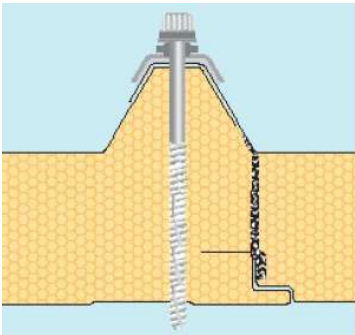

DESCRIPTION	Self-supporting metal panel, insulated with polyisocyanurate foam, for pitched roofs with a minimum slope of 7%. The external top skin of the panel is made of metal trapezoidal steel, galvanized/zinc-aluminium and pre-painted. The thermal insulation on polyisocyanurate foam may have a thickness from 40mm to 80mm. The internal skin is made of steel sheet galvanized/zinc-aluminium and pre-painted (subsequently up to 200mm).	
GEOMETRICAL FEATURES	<p>Length: upon customer request, with a max length of 13,5m  Cover width: 1000m  Thickness: 40, 60, 80, 100, 120, 140mm up to 200mm  Skin thickness:  No. of ribs on top skin: 5  Rib height: 35mm  Rib centres: 250mm</p>	
SPECIFICATION	The metal insulated roof shall be Toproof G5, comprising of two outer skins from pre-painted galvanised / zinc-aluminium steel and a polyisocyanurate core. The top skin shall consist of 5 trapezoidal ribs at 250mm centres providing a net cover width of 1000mm. The rib height shall be 35mm. Toproof G5 shall be obtained from The Insulation Company SA (010)495 0000	
DENSITY	35kg/m <sup>3</sup> - 40kg/m <sup>3</sup>	
WEIGHT	40mm: 8,92kg/m <sup>2</sup> 60mm: 9,68kg/m <sup>2</sup> 80mm: 10,44kg/m <sup>2</sup> 100mm: 11.20kg/m <sup>2</sup> *metal skin thickness of 0.4/0.4mm	
THERMAL PERFORMANCE	<u>R-VALUE</u> 40mm: 1.96 60mm: 2.94 80mm: 4.00 100mm: 5.00	<u>U-VALUE</u> 40mm: 0.51 60mm: 0.34 80mm: 0.25 100mm: 0.20

JOINT	<div>The lap joint is supplied with a continuous sealing strip inserted during manufacture. The particular moulding of the joint has been especially designed in order to avoid water infiltration</div> <div></div>																																																																																																																																	
FIXING	<div>Fixing is achieved using screws with a Ø 6,3mm</div>																																																																																																																																	

## TECHNICAL DATA SHEET

### TOPROOF G5

Partnered by 

#### ROOF ASSEMBLY

In order to assure the right water outflow as well as to avoid oxidation on metal supports, the panels must be assembled with a slope not lower than 7%.

For pitched roofs made with more than one panel in longitudinal direction, it is necessary to overlap the panels as below. The overlap length must be sufficient to avoid water infiltration.

#### MAINTENANCE

All roofs including metal insulated panels, require periodical maintenance. It is recommended that a thorough inspection of the roof is carried out at least yearly, in order to check the condition.

A regular cleaning of the roof with particular attention to areas not subjected to the washing action of the rainwater, where it can form concentrations of corrosive substances for the metal support, is also recommended in order to maintain the aesthetic characteristics and physical properties of the elements and to prolong the efficiency of the protective coating.

It is necessary to proceed with an immediate extraordinary intervention, when the inspections have discovered a problem, in order to restore the initial conditions.
